

EDITORIAL ...

International Society of Extension Education (INSEE) has published this abstract book that includes abstracts of research papers published in the International Journal of Extension Education (INJEE) from the year 2005 to 2019. These abstracts focus on need based and methodological research conducted by the Extension Education and Agricultural scientists from various countries all over the world. This publication has been aptly divided into twenty three sections that cover a wide range of research topics in the field of Extension Education and Agricultural development. We hope that the contents of the publication would be useful to an audience ranging from students to experienced researchers and developmental personnel in the respective field of study. The research published herein may help to investigate need based problems such as the development of rural community in both developing and developed countries.

Moreover, this publication also includes details of several international seminars and conferences organized by INSEE over past 14 years. During these events, INSEE has also conferred Life Time Achievement Awards to those dignitaries who served the cause of Agricultural and Rural Development over a major span of their life. Moreover, the names of dignitaries who have contributed to the growth of the INSEE over the last one and half decades have also been documented in this publication.

We have observed that a large number of studies have been conducted only in Agricultural Education/Training and Transfer of Technology, while other areas of study still remain unexplored. Therefore, we hope that in the changing global scenario of communication and globalization, new areas of research may attract the scientists from the rural development and agricultural field. Finally, in the future issues of INJEE, we will continue to invite research papers that have a global applicability.

We acknowledge the guidance and encouragement provided by Dr. R. R. Sinha, Dr. K. Narayana Gowada and Dr. V. R. Kubde for this publication.
